Sub: Assistance required in the joint inspection & rectification of TFP oil NIL case in MC 40015.

It is brought to your kind attention about an issue regarding the TFP oil in motor coach no. 40015. During a recent scheduled inspection of the MEMU rake (188955 + 40007 + 40015 + 188783) on October 26, 2024, it was observed that the TFP oil level in MC 40015 was nil in both the conservator tank and the TFP tank, which has a capacity of 668 liters. Additionally, leakage has been detected from the terminal board of TFP JB-2 (behind the RF box) as well as from the terminal boards of the TL and DL of the choke tank.

Therefore, I kindly request that you depute a representative for a joint inspection and the earliest rectification of the issues mentioned above at the MEMU Shed/JAJ.

Sr. DEE/MEMU/JAJ
